2024_28_III_OOPS Using Java Lab

2028_REC_OOPS using Java_Week 2_Q8

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

A bank generates secure codes using 3-digit numbers where each digit is unique, and the code must be divisible by 3. You are tasked with generating the first N such codes based on user input, ensuring the digits are unique and the number is divisible by 3.

Note: Use nested for loops to solve.

Input Format

The first line contains an integer N representing the number of valid codes to generate.

Output Format

The output prints N line,s each line contains a valid 3-digit code.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5
Output: 102
105
108
120
123

Answer

```java
import java.util.Scanner;

class Solution {

    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);
        int N = scanner.nextInt();
        int count = 0;

        for (int i = 1; i <= 9; i++) {
            if (count == N) {
                break;
            }
            for (int j = 0; j <= 9; j++) {
                if (count == N) {
                    break;
                }
                for (int k = 0; k <= 9; k++) {
                    if (count == N) {
                        break;
                    }
                    if (i != j && i != k && j != k) {
```

```java
            int number = i * 100 + j * 10 + k;

                if (number % 3 == 0) {

                        System.out.println(number);

                            count++;

                }

        }

                                            }
                            }
                    }
            }
        }
```

Status : Correct   *Marks : 10/10*
